3-BEDROOM HOUSE

with Carport & Deck

U.S. DEPT. OF AGRICULTURE
WASHINGTON, D.C.

JAN 4 1970

This house design is the result of a cooperative effort between the home economists of the University of Arkansas and the USDA Plan Exchange Staff.

The plan contains 1,740 square feet, not including the deck and carport.

The house is livable, spacious, and ideal for the growing family.

The bedrooms are large enough for double beds and contain more than adequate closet space.

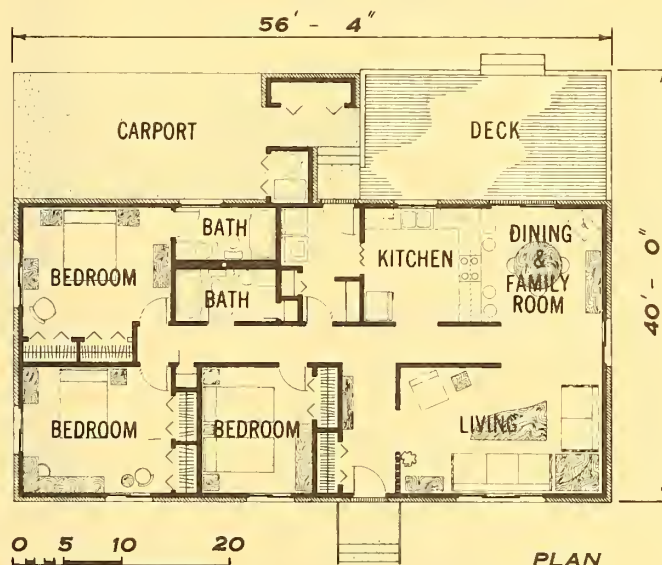

Two complete bathrooms adjoin, and, therefore, the plumbing is in a compact area. One bathroom serves the master bedroom; the other is for general use.

Centrally located and adjoining the bathrooms are the laundry-storage room and mechanical room, which contains the heating unit and the water heater. The mechanical room is accessible only from grade level on the outside of the building.

The kitchen is broken U-shaped and convenient to the front entrance. One arm of the U forms a passthrough counter which can also be used for informal eating.

Sliding glass doors extend from the dining and family area to a large wooden deck used for outdoor living.

The living room is accessible from all parts of the house yet remains separate for entertainment.

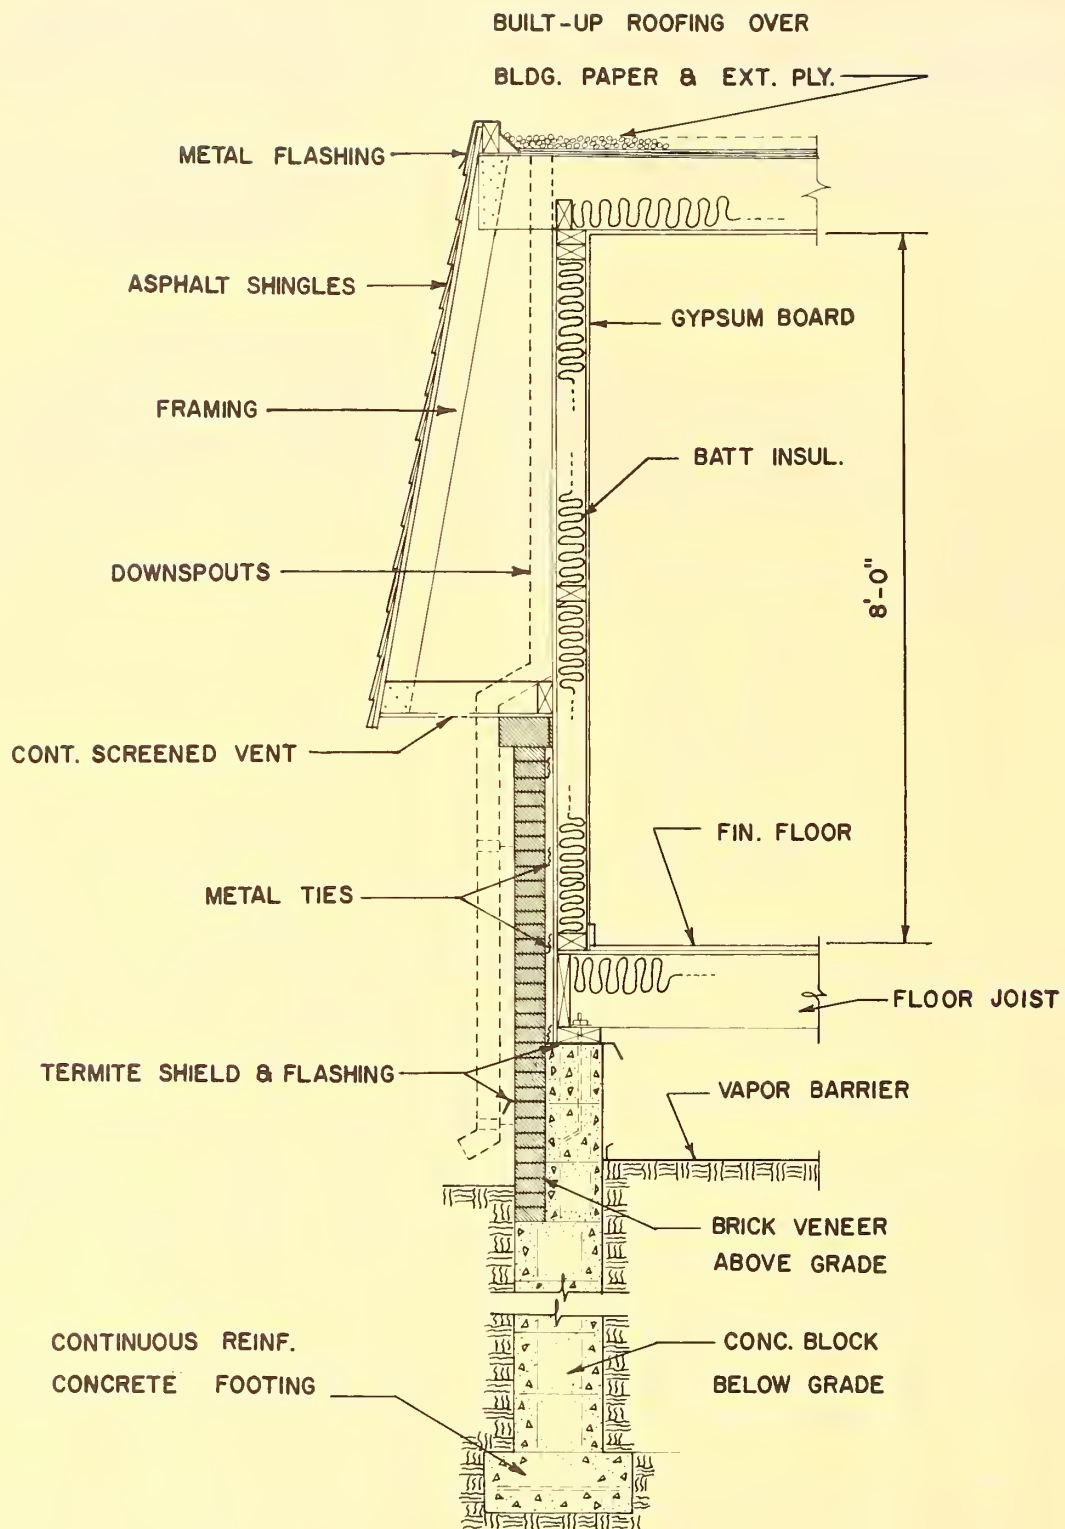

This house was designed to reflect the changing style in residential architecture. It has a modern mansard roof on brick veneer and wood-frame walls.

Complete working drawings may be obtained from the Extension agricultural engineer at your State land-grant university. There may be a small charge to cover cost of printing.

If you do not know the location of your State land grant university, send your request to Agricultural Engineer, Extension Service, U.S. Department of Agriculture, Washington, D.C. 20250. Your request will be forwarded to the correct university.

ORDER PLAN NO. 7207, 3-BEDROOM HOUSE, WITH CARPORT AND DECK.
